**2026 BULL SALE**

**THURSDAY MAY 21<sup>ST</sup>**

**FURRACABAD ANGUS BULL COMPLEX  
642 CHERRY TREE ROAD, GLEN INNES NSW 2370**

# Why Don't All Bull Breeders...

- Treat their cows tougher than you treat your cows?
- Refuse to make an excuse for a cow, or give her a second chance?
- Prepare their Bulls Soley on Grass?
- Assess and score Bulls for Temperament?
- Assess and score Bulls for Fleshing Ability, Thickness, Muscling, Masculinity, Hair Coat and Overall Rating?
- Assess and score Bulls for Low Maintenance and Grass Efficiency?
- Assess and score Bulls for Feet and Leg conformation?
- Assess and score Bulls for Preputial Prolapse problems?
- Provide a One-Year Guarantee on the Bulls they sell?
- Guarantee their Calving Ease Bulls?
- Control Flies and other parasites with Genetics– instead of Chemicals?
- Invite customers to participate in Bull assessment days?

The Furracabad Angus Team L-R: Brett, Tania, Geoff and Zac

# WELCOME

## TO THE FURRACABAD ANGUS (PREVIOUSLY CALLED PHARO BULLS) 8<sup>TH</sup> ANNUAL SALE

**OUR STORY** We became increasingly frustrated with the lack of functionality and profitability from the genetics we were purchasing. In 2015 we became aware of Pharo Cattle Company in the USA who had been breeding and raising beef seedstock through a program that meant the animals had to be functional in many environments or they just would not survive.

In 2016 we embarked on the process of purchasing and importing these genetics to improve our breeding female herd. We discovered that we were able to breed and raise our cows with little to no inputs and they were very fertile, calved easily and functional.

A result of this program were Bulls that were Raised Solely on Grass that are Naturally fertile, tough and increased the Profitability of our herd.

It is Furracabad Angus's vision to continually source and invest in breeding programs that will ensure they are breeding the most Functional, Efficient animals, so that we can Breed, Raise and Sell genetics that are Efficient and Profitable on Grass alone without the requirement of expensive inputs.

***Furracabad Angus bulls are performing across a wide range of environments. We know they can do the same for your herd.***

## SALE INFORMATION

### PURCHASING OPTIONS

The best way to purchase the Bulls you need is to be present at the sale. However, we understand this is not always possible so Furracabad Angus provides the additional options below to get your Bulls bought.

#### ONLINE BIDDING

This sale will be interfaced with StockLive. You **MUST** register before the sale commences at 1pm. Pre bids can be placed up to 48 hours before the sale OR Bid Live online at [www.stocklive.com.au](http://www.stocklive.com.au) Phone 1300 259 742.

If you choose to bid via the Internet you need to ensure you have a very good internet connection as the Furracabad Angus sale moves very fast and it will be easy to miss the bull you want.

#### SIGHT-UNSEEN BIDDING

If you can't make the sale and Online bidding is not for you, we will help you get your Bulls bought. We will arrange for your confidential bid to be made. We guarantee that your Bulls will be purchased for the lowest possible price.

The team at Furracabad Angus take the privilege of bidding on your behalf seriously. We need to know which Bulls you want to bid on, how many bulls you want and what your maximum bids are.

If you would like Furracabad Angus to handle your Sight Unseen bids you will have to send them to email: [bulls@furracabadangus.com.au](mailto:bulls@furracabadangus.com.au) and call Brett on 0448 768 058 before 5pm Wednesday 20th May 2026.

# SALE INFORMATION

## HEALTH AND FERTILITY

All Furracabad Angus Bulls have passed a full Veterinary Bull Breeding Soundness Evaluation (VBBSE) which includes semen Motility and Morphology with results in the catalogue, and have had the initial vaccination and booster of 7 in1, Pestiguax and Vibrovax.

## SEMEN INTEREST AND USE

On a few Select bulls we retain the right to collect semen for use within the Furracabad Angus breeder herd. Collection would be at Furracabad Angus expense at a time that suits the bull owner.

Any Bull purchaser can collect semen for in herd use only. It is a condition of sale that no bull purchaser can sell semen to a third party. The Furracabad Angus semen interest applies to bulls even if they are on sold.

## GUARANTEED CALVING EASE

Many of the Bulls available in this sale could be used on Maiden Heifers. We have used each Bulls DNA profile to give them a score 1-10, 10 being the absolute best. Bulls with a calving ease score of 6 or better should work well on maiden heifers. To show the level of confidence we have in our calving ease score Furracabad Angus provides a guarantee for all 9 and 10 star calving ease bulls. The Calving Ease Guarantee covers the period of calving that results from the Bulls first joining period. If you have any calves in this period that require assistance we will either pay you \$100 per calf assisted or if veterinary intervention is required we will pay the resulting vet bill.

## DISCLAIMER

All reasonable care has been taken to ensure that all, of the information provided in this catalogue is correct. However, Furracabad Angus and the selling agent do not assume responsibility for the correctness, use or interpretation of the information included in this catalogue.

Announcements from the auction block on the sale day and any supplemental information provided prior to the sale will take precedence over the printed matter in this catalogue.

## SALE DETAILS

GST: This sale is a GST exclusive sale. GST will be added to the purchase price.

Settlement: Elders Inverell will attend to all settlement details.

**AGENT REBATE** A 2% rebate is offered to outside agents attending the sale to introduce and assist bull buyers.

To qualify Agents must:

- Introduce the clients by email prior to the sale
- Attend the sale with the client
- This rebate only applies to purchases made by the client
- Settles the account within 7 days

**INSURANCE** If you require your Bulls to be insured, contact the sale agent Elders Inverell.

## BULL BUYER REFERRAL REWARD

Word of Mouth is the most powerful form of advertising and marketing.

Furracabad Angus's Bull Buyer Referral Reward is a way we can show you our appreciation for your word-of-mouth advertising. To receive your Bull Buyer Referral Reward, please email, with their consent, the name, phone number, email address and any additional contact details for the person you are referring. We will contact them introducing ourselves acknowledging your referral.

Furracabad Angus will pay you 3% of the purchase price of each bull they purchase in the next 3 (three) years.

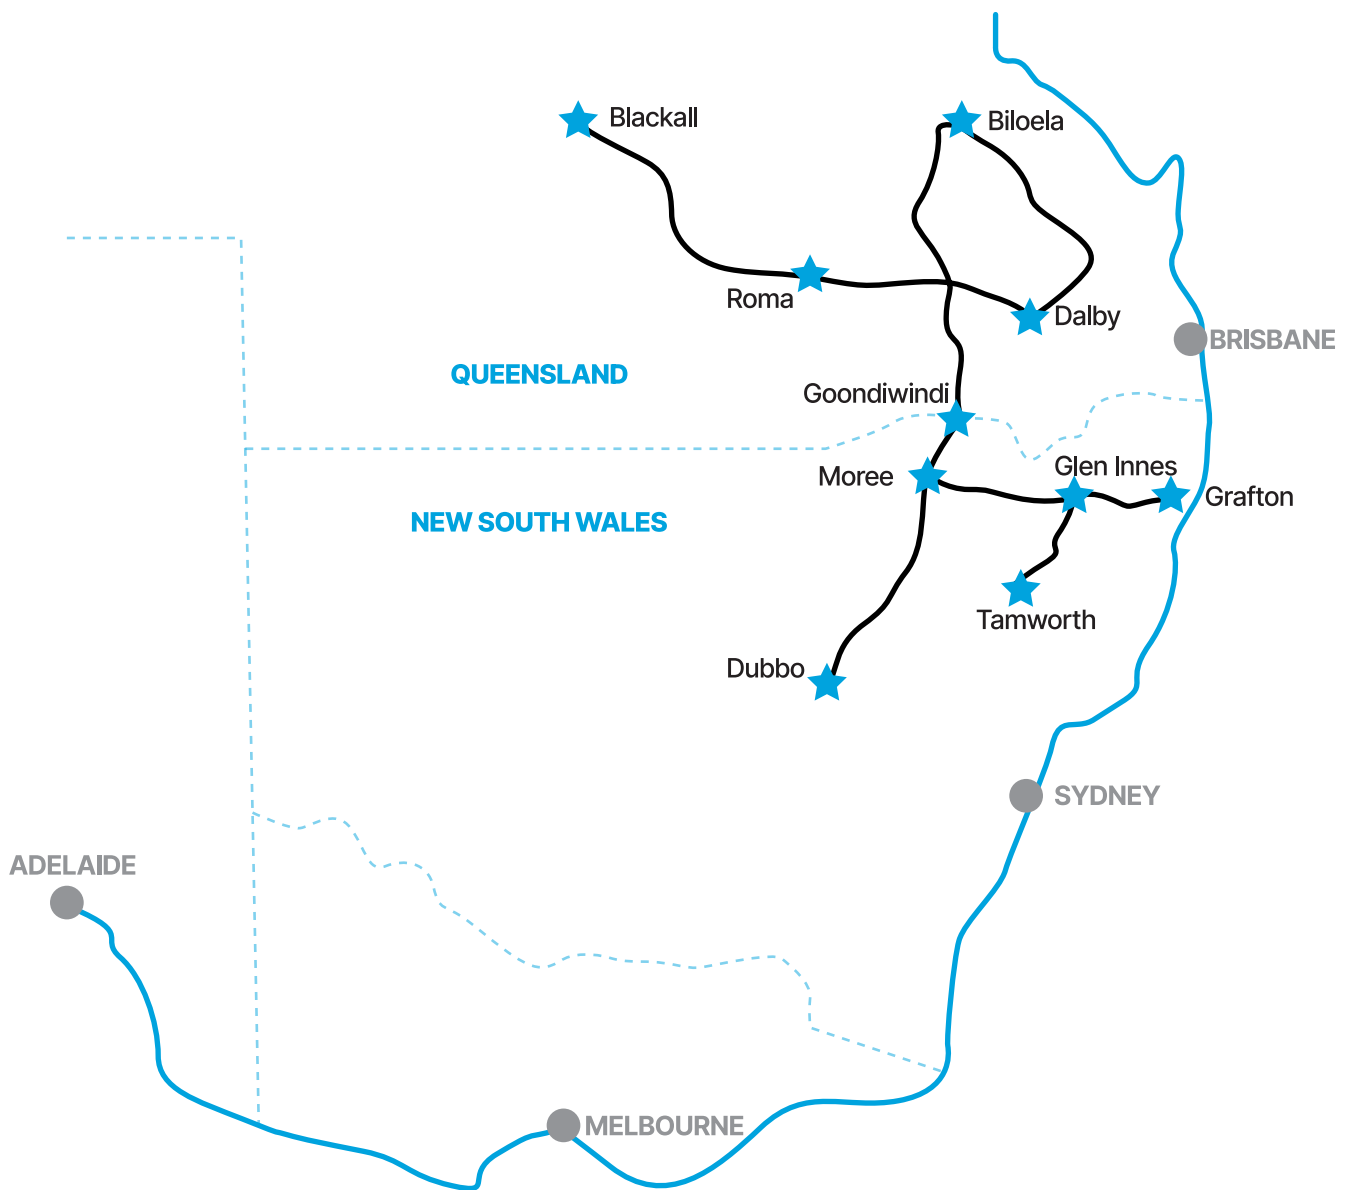

# BULL TRANSPORT

Furracabad Angus are very aware that getting Bulls transported can be challenging and we are also aware that you have made a significant investment that needs the utmost care.

Furracabad Angus will deliver bulls free of charge to predetermined major selling centres (saleyards) along the marked routes - see map below. Any additional freight costs are the purchaser's responsibility. We will also assist bull purchasers in getting their bulls delivered as economically as possible by coordinating combined loads.

If you purchase 10 (ten) or more bulls, we will deliver to your door free of charge. Furracabad Angus will not pay for any transport cost that is not arranged and previously approved by Brett - 0448 768 058.

Furracabad Angus recommends that you insure your bulls for transport as the Furracabad Angus's one year guarantee does not cover Bulls being transported.

# CATALOGUE INFORMATION EXPLAINED

## **FURRACABAD ANGUS ARE DIFFERENT FOR ALL THE RIGHT REASONS.**

While many other Bull Breeders are breeding for higher production per animal they are possibly unaware that they are pushing their customers towards a less profitable herd, Furracabad Angus are always focused on breeding the best Bulls for our customers so they can increase the kilos of beef produced per hectare grazed.

## **SALE LOT NUMBER, ID TAG NUMBER, DOB AND NAME**

Each Bulls' Sale Lot Number, ID Tag Number, Date of Birth and Name are shown in the top section of each Bulls' catalogue space. The sale lot number for each bull is the "Black Number" on the Yellow Tag in their offside ear, while the Blue Tag in the near side ear has the bulls' ID number. DOB is an approximate date of birth - it is derived by the join date and would be within 2 weeks of the calving date.

## **SIRE, MATERNAL GRANDSIRE AND DAM AGE**

The Sire listed is confirmed through the DNA profile parent verification process. Maternal Grandsire is also confirmed through the DNA profile parent verification process. Dams age listed is the dams age at the time of calving for the bull listed in this catalogue.

## **BASE PRICE**

Each Bull has a Base Price which is determined by analysing the assessment scores. The Base price is the reserve price for each bull. The auction will start at the base price. We will not sell a Bull for less than the base price.

## **PHYSICAL TRAITS**

### **OVERALL RATING**

This is not just an average of our assessment scores. It also includes our assessment of the "Eye Appeal" as it relates to the visual impact of the bull. Some bulls catch your eye, normally they are the ones that have good Masculinity, Fleshing, Thickness and Muscling. Furracabad Angus will only use bulls in the Breeder herd that have an overall rating of 8 or above, this is important for us to continue to breed top quality Bulls.

### **MASCULINITY**

A Bull should look like a Bull. Secondary sexual characteristics like a thick crest and neck and a head that is strong looking and wide between the eyes. Bulls would ideally have a Masculine appearance as early as possible. This indicates that the sooner the bull has reached sexual maturity the sooner his daughters will be ready to breed.

### **THICKNESS**

Furracabad Angus thinks about thickness in the form of Volume. It's how much air does the Bull's body displace, depth of body, width of back and belly. Bulls that have a large girth will "Do" better on low quality feed.

### **MUSCLING**

We are in the Beef Business, so muscling is important. The best place to look for muscling on a Bull is in the twist area (in between the hind legs) it should look full and plump, the contrast would be "dairy cows" where there is no muscle inside the hind legs.

### **HAIR COAT**

An animals Hair Coat is a good indicator of overall health. A Slick and Shiny coat in the summer or soft and even length coat in the winter are good signs. On the flip side a dull uneven or dead looking coat would indicate a less healthy animal. If you are wanting a bull for a hot and humid area where flies and ticks are present, selecting for a high Hair Coat score is a must.

# CATALOGUE INFORMATION EXPLAINED CONT.

## TEMPERAMENT

A Bull's disposition is the last thing we look at while the bull is in the assessment pen on the public bull assessment day, this gives the bull the best opportunity to show the best and the worst of their temperament. Furracabad Angus believes a bull with a bad disposition has no place in anyone's herd and we will not sell him no matter how good his breeding or traits are.

A bull with a score of 10 has the best disposition, he is respectful and moves off pressure without being flighty. A score of 6 is still a very well-mannered Bull. Bulls with a Temperament score of 3 are more sensitive and have a larger flight zone. Any Bulls assessed with a score of 1 are culled. Furracabad Angus suggests that if you are only purchasing one bull, choose bulls scored between 6-10.

## MEASUREMENTS

### GRASS EFFICIENCY

Good Grass Efficiency is an indicator of Early Maturity, the formula is based on University of IOWA, USA research. Put simply, the Grass efficiency score looks at the contemporary group to see which bulls have achieved the largest proportion of their calculated mature weight. An animal that is 55% of his mature weight is much better than an animal that is 40% of his mature weight at the same age.

This translates in your herd to Furracabad Angus sired females reaching maturity quicker and being ready to breed at the ideal age of 12-14 months. It also means that you can turn off Furracabad Angus sired steers faster as they reach their genetic growth potential quicker.

Grass efficiency is not to be confused with Net Feed Intake (NFI) – the way that many breed societies currently calculate NFI, in our view, is the wrong way around, rewarding tall lean animals which will put on weight in the feedlot and penalizing animals that quickly put on fat in a grass only environment – which is imperative for maternal efficiency and therefore profitability.

### FRAME SIZE

Frame size is hip height adjusted for age. We simplify the numbers to a scale of XS, S, M, and L.

Frame score is very indicative of the amount of grass an animal requires for its maintenance. The smaller the frame the lower the amount of grass the animal requires for its maintenance. Based on information from Beef Improvement Federation (BIF) most of the bulls being sold by seedstock producers are in the 5-7 frame size range. These are too big to fit most environments. Furracabad Angus Bulls on average are 3-4 frame size and raised on a grass only diet but will weigh, as much as if not more, than most conventional seedstock bulls.

The most interesting part about all of this is that the only difference between a 4 and 5 frame size is 5 cm which is between the ground and the belly– this does not weigh anything, you don't get paid for it and you can't eat it!

### SCROTAL CIRCUMFERENCE

Actual measurements are listed in the catalogue. Furracabad Angus Bulls are raised 100% on grass so there is nothing in the scrotum but testicles – no fat like often seen in grain developed bulls . You cannot compare our Grass fed bulls measurements to the conventional grain-fed seedstock bulls. Scrotal Circumference is positively correlated to Frame size and is a good indicator of early maturity. This passes into heifers also.

### MOTILITY AND MORPHOLOGY

Each bull in this catalogue has been assessed by an accredited BULLCHECK vet. All bulls must PASS a VBBSE (Vet Bull Breeding Soundness Evaluation). There are three components to this examination, 1. Physical – assessing the bulls overall health, structure and reproductive tract, 2. Scrotal Circumference and 3. Semen analysis – evaluating semen quality including Motility (percentage of sperm swimming) and Morphology (sperm structure).

## DNA PROFILE

### CALVING EASE & FERTILITY

These are arguably the two most important traits, no calf or a dead calf has a very poor weaning weight and won't pay the bills. Calving ease scores are calculated from each Bulls DNA profile, Birth Weight (BW) and Calving Ease Direct (CED). We confidently recommend Furracabad Angus Bulls with a Calving Ease score of 6-10 for use over maiden Heifers and we guarantee the 9 and 10 star calving ease bulls (see page 3).

### LOW MAINTENANCE

Body Condition maintenance requirements must be met before any weight gain or reproduction can take place. The Furracabad Angus' Bulls Low Maintenance score is calculated from each bulls DNA profile. In our view many conventional Bull Breeders aim for too much milk and growth resulting in an animal that does not fit in most environments due to its high maintenance requirements.

### CARCASS TRAITS

Each Bulls DNA profile is used to calculate a carcass trait score. We look at Marbling, Tenderness and Ribeye size. The greatest emphasis is put on Marbling. Bulls with good scores for Grass Efficiency and Low Maintenance can finish (Marble) very well on grass as well as on grain.

### RED GENE AND HORN GENE

A small number of breeding females, especially our Heat Tolerant genetics, carry a Red coat gene or a Horn Gene and therefore they may occasionally show up in the progeny. Where necessary these details are disclosed, from our DNA profiling, in the sale catalogue.

### FLESHING ABILITY/RIB FAT

The bulls DNA profile is used to determine its Rib Fat. Fleshing ability is visually determined by looking at how soft and how much condition (fat) the bull carries under his skin. These are scored from 1-10 with 10 being the best. The fat trait indicates the animals ability to lay down subcutaneous fat.

## ONE-YEAR GUARANTEE

The Bulls offered in this catalogue have been checked for structural soundness by both a veterinarian and the Furracabad Angus team.

They have also passed a Vet Bull Breeding Soundness Evaluation (VBBSW). Any bulls that did not pass or showed potential issues have been culled.

The VBBSW certificate obtained prior to cataloging these bulls is valid for one (1) year.

Bull Fertility Guarantee for one (1) year from their date of purchase or for their first breeding season within 12 months from their date of purchase:

**a. *Permanent infertility*** – if a bull is not able to sire calves because of a complete failure of his fertility, and will not ever likely recover, Furracabad Angus will either provide a satisfactory replacement bull or issue a credit for the purchase price of the bull less its salvage value.

To make a claim that the bull is permanently infertile, and not likely to recover, the bull purchaser must provide two (2) veterinary reports, ten (10) weeks apart stating the bull's semen is completely infertile. The veterinarian must state in their report that in their opinion there is no evidence that the bull's permanent infertility was not caused by any infection, illness or injury during the guarantee period which could have affected his fertility.

**b. *Temporary infertility*** – if a bull's temporary infertility has limited his ability to sire calves in the purchasers' normal breeding season, but is likely to recover within twelve (12) months from the date of diagnosis for future use, then Furracabad Angus will either provide a temporary satisfactory replacement bull for the relevant breeding season, at the conclusion of which the bull is to be returned to Furracabad Angus, or issue a credit for 50% of the purchase price of the bull.

To make a claim that the bull has a temporary infertility issue the purchaser must provide a veterinarian report stating the extent and details of the temporary infertility, including semen motility and morphology scores. The veterinarian must state in their report the cause of the temporary infertility but also that it was not caused by any infection, illness or injury during the guaranteed period which could have affected his fertility.

Each credit issued under (a) and (b) above (or part thereof if the credit is not fully utilized) can only be applied for the purchase of one (1) replacement bull. The credit is only valid from the time of issue to the next Furracabad Angus bull sale.

In order to make a claim against the one (1) year Fertility Guarantee Furracabad Angus must be notified on the same day the issue is noticed, and the bull is to be examined by a licensed veterinarian as detailed above. If the attending veterinarian deems treatment would be in the best interest of the bull, then the treatment should be administered immediately.

The attending veterinarian's written report to Furracabad Angus is to identify the animal, identifies the problem and must provide the prognosis, as requested above.

Furracabad Angus reserve the right to get a second opinion.

The Bull Fertility Guarantee does not cover infertility, injuries or death caused by:

- Misadventure, accident or injury eg: bulls fighting causing broken limb/s, broken penis, yard / fence injuries etc.
- Negligence, carelessness, neglect.
- Disease, illness, infection.
- Stress, nutrition, poisoning.
- Mismanagement, poor management (low cow to bull ratio).
- During transportation.
- Motorised vehicles and / or equipment.
- Failure to maintain acceptable animal husbandry standards.

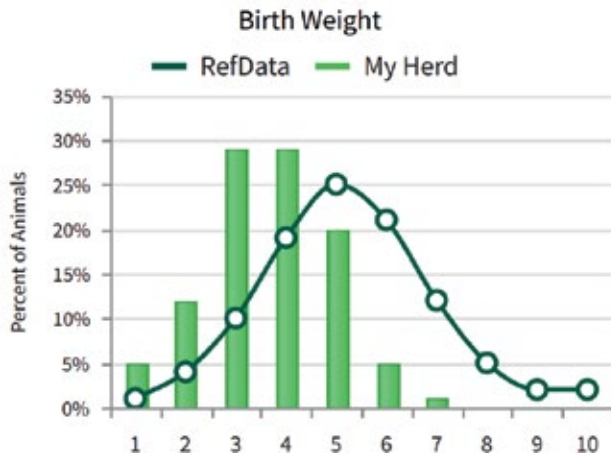

This guarantee only applies to bulls that have always been maintained and owned by the original purchaser.

# INGENITY PROFILE INFORMATION

Furracabad Angus have been using the Neogen Ingenuity profiling system for a number of years and believe the traits below will help you select better Sires for your operation.

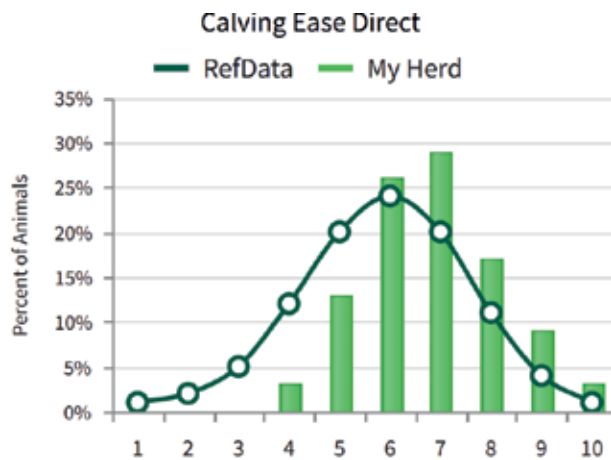

Furracabad Angus have not focused on any one trait but have relied on the environment in which the herd lives to allow the best and most profitable animals to remain In the herd. Fertility and calving ease are the keys to profitability – a PTIC female and then a live calf is essential.

Following we have included, for various traits, graphs of the Furracabad Angus entire herd compared to the Angus sired animals in the total ingenuity platform, there are animals in the platform from several countries but dominantly from Australian and the USA.

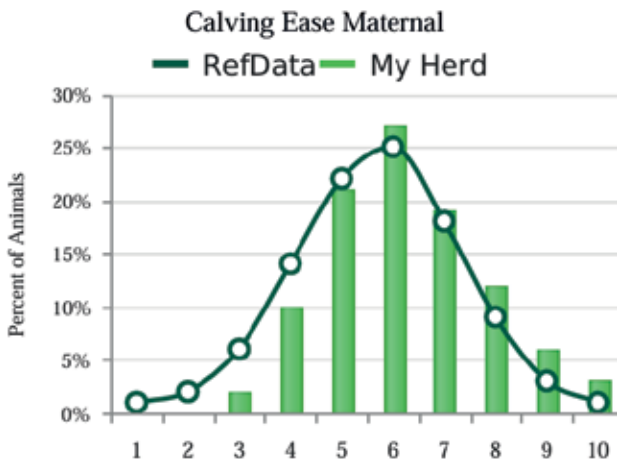

## BW - Birth Weight

The bigger the number the higher the chance of a bigger calf  
Higher scores equate to higher birthweight potential calves.  
This trait forms part of the Pharo Bulls Calving Ease Index for each bull.

## CED - Calving Ease Direct

Greater probability a calf will be born unassisted out of a first calf heifer, including birth weight and shape of the calf.  
A higher value indicates greater calving ease.  
This trait forms part of the Pharo Bulls Calving Ease Index for each bull.

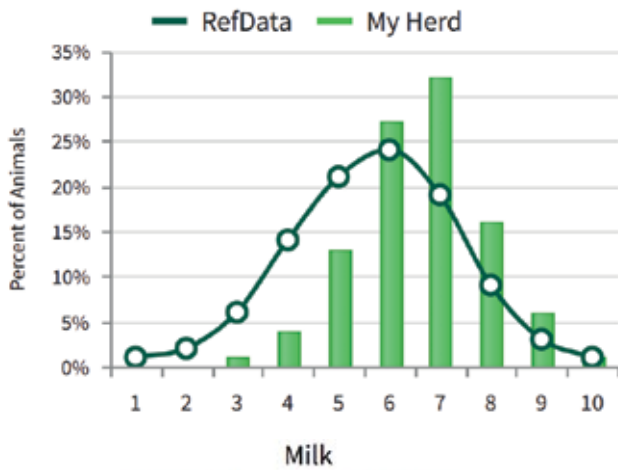

## CEM - Calving Ease Maternal

Includes all genetic factors that impact a first-calf heifer's ability to calve unassisted, such as pelvic area and her genetics for birth weight.  
A higher value indicates greater calving ease.

# INGENITY PROFILE INFORMATION CONT.

Heifer Pregnancy Rate

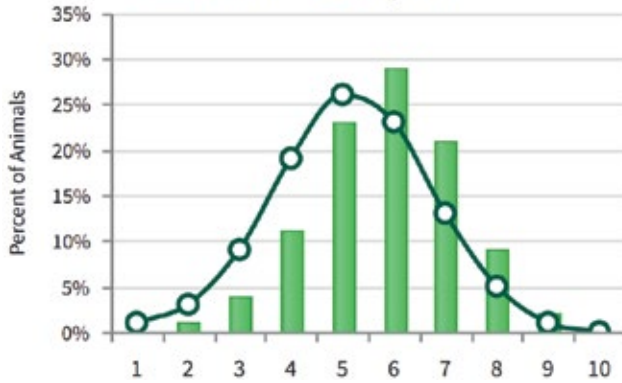

**HPR - Heifer Pregnancy Rate**

Relates to a sire's daughters potential to conceive during breeding season, relative to other heifers.

A higher value is desired.

Milk

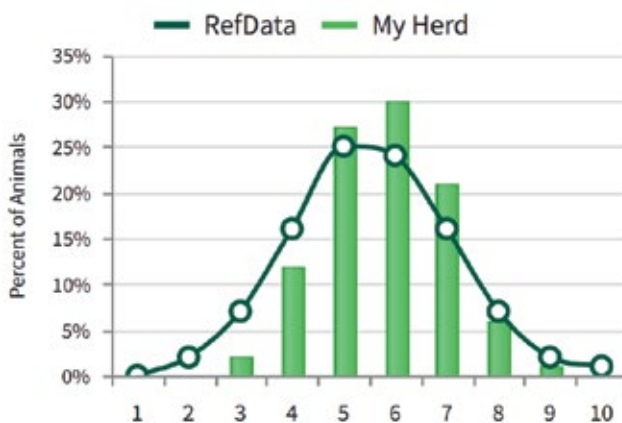

**MILK - Milk**

Kilograms of calf weaning weight due to dam's milk production. Optimize "milk" to the forage environment.

This is an interesting result and believe the higher score is coming from the quality of the Pharo Bulls herd milk rather than the quantity.

Stayability

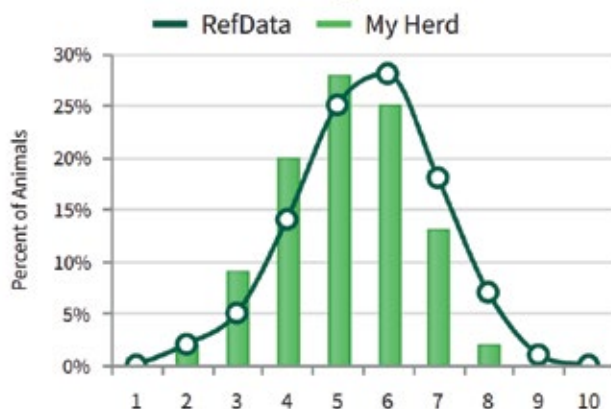

**STAY - Stayability**

The chance a heifer will remain in the herd as a productive cow until at least six years of age, producing a calf every year from the age of 2 years.

A higher value is desired

Docility

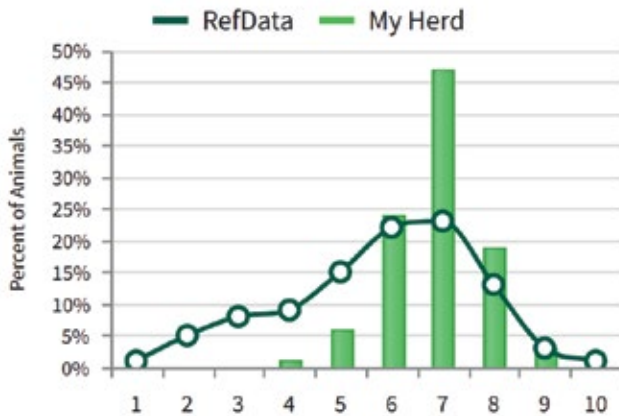

**DOC - Docility**

Genetic potential to be calm or have calm offspring. Higher scores indicate a higher probability of acceptable disposition.

This trait is indicating the genetic markers for a desirable temperament. The Temperament score listed against each bull is the score collected on Bull Assessment Day and reflects how each bulls temperament is effected by the environment.

# INGENITY PROFILE INFORMATION CONT.

Marbling

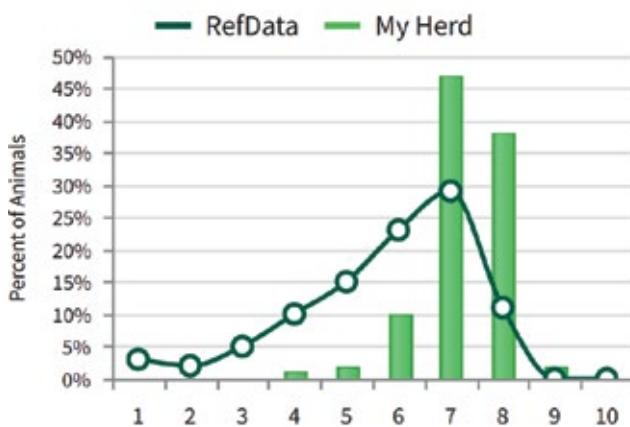

## MARB - Marbling

USDA marbling score at a similar end-point. The higher the marbling, the higher the USDA quality grade.

A higher value is desired.

Ingenity profiling was originally developed in the USA and so the USDA marbling score is the reference, this is a very good indication of each bull's ability to lay down intramuscular fat.

Fat Thickness

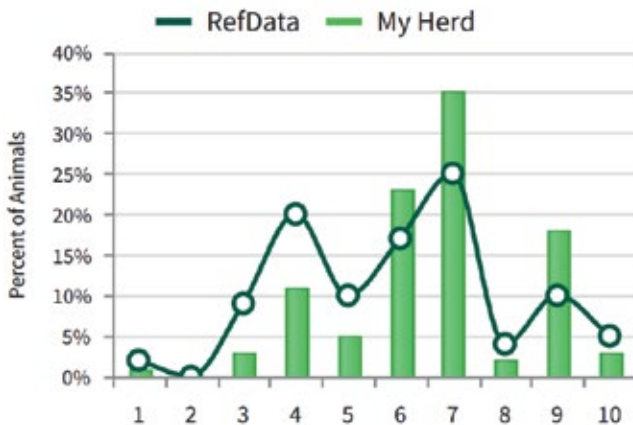

## FAT - Fat Thickness

Backfat as measured on a carcass. Fat thickness is scored as depth of fat in mm over the ribeye muscle at the 12th rib.

A higher value is desired.

This trait score has replaced the Fleshing Ability visual score for each bull this year.

Tenderness

## TEND - Tenderness

Genetic potential for beef tenderness (Warner Bratzler Shear Force).

A higher score is more tender.

---

## **FURRACABAD ANGUS BULLS,** **THE *Program* TO INVEST IN**

---

### *Our Goal* **IS SIMPLE**

To breed and raise Angus and Angus Composite Heat Tolerant bulls, Solely on Grass, that improve the Productivity, Resilience and Profitability of Commercial Beef Producers.

Our genetic selection focuses on Moderate Framed cattle with strong Maternal Traits, high Fertility, excellent Calving Ease and Muscling and Fleshing Ability BRED IN, not fed in, together with Strong Early Growth, Efficient Finishing and Consistent Long-term Performance.

We measure success by Kilograms of Beef Produced per Hectare, not kilograms per animal.

### *Well Being* **FOR THE FARMER**

Time is precious, having cattle that are highly fertile and can calve easily, don't require handling to treat/drench, that can survive on what's available in the paddock - grass, no need to transport feed to them, are calm quiet and easy to handle - Gives the farmer more time!

### **INCREASE YOUR** *Profit*

The major profitability drivers for Commercial Beef Producers are cattle that are Moderate Framed with excellent Calving Ease, high Fertility, good Fleshing Ability and Muscling together with a quiet temperament, functional and requiring little time or inputs which boosts your profits significantly.

---

## **CALVING EASE, FERTILITY & MUSCLING** **BRED IN NOT FED IN**

Conquistador was the first bull we purchased from Pharo Cattle Company to reprofile our herd's genetics. He offers exceptional maternal traits, including Calving Ease (Top 1%), Birth Weight (Top 1%), and Short Gestation (Top 10%), alongside a 3% ranking for Grass Efficiency.

His lower mature weight and frame size have successfully reduced our cow size while maintaining the desired thickness and muscling in the Furracabad herd. Having used him extensively, we are now seeing his impact through females with beautiful phenotypes, depth, and thickness.

## PCC D-J COMMISSIONER 2715C

---

*Mashona is an indigenous breed from Africa. The breed originated with the Shona people in Zimbabwe. It was developed under natural selection without any external inputs for thousands of years in an extremely harsh and unforgiving environments.*

*Mashona cattle have extremely low maintenance requirements.*

*They are very fertile and easy fleshing.*

*They are highly mobile grazers that have the ability to browse. They have early carcass maturity and finish well on grass. Mashona excel in hot and humid environments with low quality forages.*

*They are very resistant to parasites and disease.*
